Education

KL University

B.Tech, Computer Science and Engineering (Data Engineering with AI) — CGPA: 9.52 / 10

Jul 2023 – May 2027

Hyderabad, India

Experience

Full-Stack Developer Intern

Jan 2026 – Mar 2026

NoDevBuild

Remote

- Engineered responsive, data-driven interfaces using Next.js, integrating REST APIs and implementing Express backend endpoints to support real-time academic workflows.
- Built end-to-end features for an investment platform using Next.js and Express, spanning interactive data visualization, portfolio management views, and backend API development.
- Developed UI and integrated backend services for a food-tech platform, owning feature delivery across the full stack from data layer to user interaction.

Open Source Contributor

Sep 2025 – Oct 2025

Kestra · Busez · Android Malware Detection · DevOps Daily

Remote

- Merged fixes into Kestra (27k+ star open-source workflow orchestration platform), repairing state-management bugs in the Flows and Namespaces modules that broke bulk selection across large datasets.
- Shipped a table-based alternative view in Busez and rebuilt the Android Malware Detection dashboard in React and Tailwind CSS.
- Added search and version commands to the DevOps Daily CLI, with argument parsing and automated test coverage.

Projects

A.C.E. (Automated Command Environment) | Python, Unsloth/QLoRA, Ollama, Next.js, TypeScript

Aug 2025 – Present

- Fine-tuned Gemma models with QLoRA via Unsloth and served them locally through Ollama, giving the assistant a fully offline LLM backend with no external API dependency or per-token cost.
- Packaged the tool as a pip-installable CLI (`ace-cli`) with 9 subcommands spanning project navigation, scheduling, backups, and a Textual TUI; integrated GitHub REST APIs for repository creation, authentication, and branch management, with a Next.js dashboard for execution history and logs.

TraceVault | NestJS, Next.js, PostgreSQL, Prisma, AWS EC2, nginx

Feb 2026 – Present

- Built a knowledge platform where developers record errors, decisions, and lessons learned as searchable engineering traces, on a 13-table Prisma/PostgreSQL schema covering projects, reflections, voting, collections, and threaded discussion.
- Deployed to AWS EC2 behind an nginx reverse proxy with PM2 process management and a static Elastic IP; shipped feed, dashboard, vault, and public profile surfaces including a GitHub-style contribution heatmap.

BugStory — IBM Bob Hackathon | FastAPI, PostgreSQL + pgvector, LangChain, IBM watsonx, Next.js

May 2026

- Built a RAG pipeline that ingests a GitHub repository through the REST API, chunks and embeds it into PostgreSQL with pgvector, and uses IBM watsonx models to generate structured bug autopsies explaining root cause and fix.
- Migrated the vector layer from ChromaDB onto pgvector to consolidate storage on a single Postgres instance; built the Next.js 14 and TypeScript frontend with a guided intake flow for incomplete bug reports.

UIDAI Data Hackathon 2026 — Aadhaar Biometric Analysis | Python, Pandas, NumPy, Matplotlib

Jan 2026

- Analysed 1.76M+ Aadhaar biometric records spanning 57 states, 974 districts, and 19,707 pincodes for the official UIDAI Data Hackathon, surfacing age-wise, geographic, and temporal service-demand patterns.
- Engineered child-to-adult biometric ratio features and monthly aggregations; delivered 6 visualisations and a recommendations report supporting UIDAI service-planning decisions.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, SQL, Bash, HTML/CSS

Frameworks: Next.js, React.js, NestJS, Express.js, FastAPI, Tailwind CSS

Data & AI: PostgreSQL, MongoDB, MySQL, Prisma, pgvector, RAG pipelines, LangChain, Ollama, QLoRA fine-tuning, Pandas, NumPy, Scikit-learn, NLP

Infrastructure & Tools: AWS (EC2), Docker, Linux, nginx, PM2, Git, GitHub Actions, CI/CD, Postman

Achievements and Certifications

Leadership: Core member of Guild Club and FOSS Club KLH; volunteer at Red Hat hackathon, assisting teams with debugging and issue resolution

Certifications: NVIDIA Building Agentic AI Applications with LLMs · MongoDB Associate Developer (Python) · GitHub Foundations · Anywhere RPA Advanced · Cambridge LinguaSkills (B2)
